Session: wed09-12

The purpose of this course is to help you develop a good understanding of organizational behavior (OB) to become more effective in managing people in organizational settings. To this end, we will review and discuss major concepts and theoretical frameworks in the field of OB and apply them to address managerial problems in organizational settings.

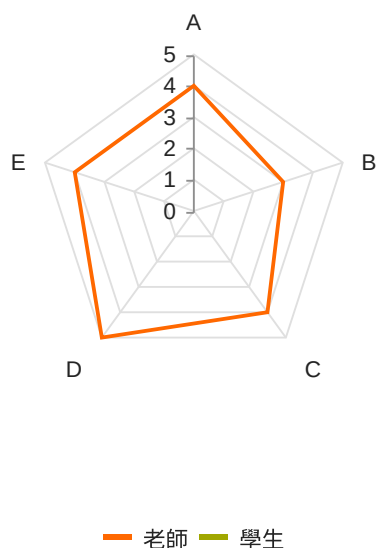

You will engage in a variety of learning activities, including but not limited to lectures, quizzes, hands-on activities, team/class discussions, and case studies. Each week, mini-lectures will highlight the conceptual foundation and the practical implications of key OB models and principles, rather than “covering” everything in the textbook. Hands-on activities, team/class discussions, and case studies will help you better understand important concepts from the text and develop application and problem-solving skills in organizational settings.
